

Weekly Report

Lu Junhua

December 8, 2014

Work has been done

1. I read some materials about logit-based model, which is added into the Gong'an data model. There still some problems in the code, mostly are inconsistencies between the paper and the code. And I tested the code it didn't return good result.
2. I read some more about scala, and I plan to finish it next week.
3. I started to read *the element of statistical learning*. I spent some time in understanding its notations, and after that I managed to read it more quickly. It is organized differently with Li Hang's book. And I may get some useful ideas later.

Work to be done

1. Finish learning scala and get started on spark(cooperate with Liu Zhiqi). Read the doc in NETEASE ftp and understand its organization, and begin writing a readme for the project.
2. Discuss about the Gong'an Data.
3. Finish Chap1,2 of *the element of statistical learning*.
